SPEEDMAX CLASSIC: EXTREMELY LIGHT, EXTREMELY PERFECT

This boot needs no modesty. With the new Speedmax Classic, highly ambitious fans of the classic skiing style now also have a complete high-end package at Speedmax level. The boot has of course also been developed in close collaboration with the Fischer athletes from the World Cup. The result: extremely light and with unparalleled efficiency thanks to the three-dimensional carbon construction with fibres that run diagonally in the sole. The maximum side stability this achieves with a balanced heel-to-toe rolling motion at the same time results in breathtaking power transfer. It is for good reason that people say: The champion takes it all!

INTEGRAL CARBON CHASSIS

The heart of the new Speedmax Classic is a three-dimensional carbon shell. The outer sole, midsole and side stabilisation elements are manufactured from the same sheet of carbon. The perfectly tuned integration of all elements in one chassis offers decisive benefits: previously unattained light weight with optimum stability and power transfer. And everything with a perfect heel-to-toe rolling motion.

XCELERATOR SSR

Two parts for one big performance every time: the split construction enables a 50% saving in weight compared to the single-part Xcelerator sole. Developed for the world's top skiers, the Xcelerator SSR sole forms the perfect entity with the Integral Carbon Chassis.

TECHNOLOGY

FISCHER CLIMATE COMFORT

Feet play a key role in power transfer in the dynamic motion sequences in cross country skiing. And this means that it is all the more important that they have the best possible conditions for this, besides a perfect fit and performance: keeping dry, optimum warmth and a comfortable in-boot climate. And this is precisely what the Fischer development department gives you with its innovative technologies.

FISCHER TRIPLE-F MEMBRANE: FEET CAN TAKE A BREATH

Sport and exercise generate body heat, and this includes your feet. Feet are more likely to become damp this way than through external moisture. This is why Fischer concentrates on efficient moisture transport from the inside to the outside: the boot liner is made of technical mesh material and permeable to air and moisture so that any moisture can be absorbed by the fleece lying on it and wicked away. It is transported to the outside via the breathable outer skin of the boot. The Triple-F membrane keeps out any unwanted effects of the weather. Feet stay warm and dry as a result.

CLEANSPORT NXT: LASTING FRESHNESS INSIDE THE BOOTS

Bacteria forms inside sweat which can lead to unpleasant odours and have a negative impact on even the best of boots. This is why Fischer boot insoles are treated with innovative Cleansport NXT: a natural odor control, leveraging beneficial and microbes which have been bound to the surface of the fabric within the boot liner. These microbes produce enzymes which break down the organic materials that cause odors in your boots, leaving the climate inside your boot fresher and more pleasant.

THE CHAMPION TAKES IT ALL

TECHNOLOGIES REDUCED TO THE MAX.

The Speedmax pole makes the RACE CODE package complete at World Cup level. With components reduced to the maximum, the new top model has everything the racer's heart desires: lighter than light, optimised stiffness and perfect swingweight.

AIR CARBON UHM SHAFT

Even lighter and more stable: the new shaft of the top RACE CODE product. The processing of special, even stronger UHM carbon fibres in the proven 16:9 geometry are responsible for the maximum stiffness and minimised weight.

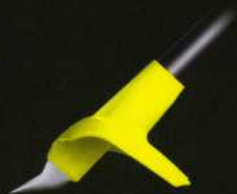

SPEED STRAP

A firm grip on everything: the newly developed strap does without any unnecessary details and focuses on what is important. With minimised weight and sufficient comfort it offers direct power transfer, perfect pole control and an optimised fit.

RACELITE AERO SMALL BASKET

For more dynamic action: extremely light basket with aerodynamic profile for even better power transfer and impressive lightness when using the pole. The right basket on the pole – so small and so significant.

- High durability
- Efficient power transfer

MULTI TIP SYSTEM

TUNING IN YOUR HANDS

Different snow conditions call for different pole baskets. The softer the ground, the larger the basket should be to enable perfect kick action. Use with roller skis in summer, on the other hand, has different requirements.

In the past the solution was either to own several pairs of poles or the time-consuming removal and reattaching of the baskets together with the respective tips. The new Multi Tip System, however, enables you to simply screw on the basket you require and thanks to a professional and ingenious locking mechanism it is securely locked in place and cannot turn. This procedure is so easy, you can even change baskets out on the trails if you need to!
